PROJECTS HANDLED

Weather Application

- Consumed an API from a open source to display a weather of a particular place by getting it from the end users through mobile application.

Hotel Bookings Application

- I developed a web application for both Admins and End-users to streamline the room booking process. The app allows users to check room availability in real-time, make bookings, and receive confirmation instantly. Admins have the ability to manage room schedules, monitor usage, and set booking restrictions.
